Stack

Python3, Django, Flask, FastAPI, SQL, SQLAlchemy, Asyncio, Docker, Nginx, JavaScript, HTML/CSS

Experience

Freelance Developer aug 2024 - now

Offering custom solutions for web development using Python (web apps).

Hackathon Participant jul 2024 - aug 2024

Participated in hackathons:

- ExpoHack (1-10 August): took 1st place with our team, the Cacti, by solving a problem for Expobank. We developed a client database management system aimed at reducing lead generation costs;
- DatsDefence (12-13 July): gamethon, competed with other participants for the best tactics and algorithm;

Independent Developer/ Self-Directed Learning sep 2023 - jun 2024

Developed personal pet projects to enhance programming skills:

- cou: async CLI utility for counting lines of code in projects (asyncio, aiofiles, argparse, tqdm);
- www.zluuba.art: personal website (Flask, Nginx, Docker, JavaScript, html, css);
- games of terminal: console-based gaming platform (curses, SQLite3, self-made GUI, achievement system, customization);

Student / Trainee nov 2022 - sep 2023

Learnt programming (Python, JavaScript) and gain the basics of web development. Study projects:

- Task Manager: basic CRUD web-app developed with Django, featuring authorization, authentication and several different models (Django, PostgreSQL/SQLite3, Bootstrap, Rollbar);
- Page Analyzer: web-app designed to analyze specified pages for SEO suitability (Flask, BeautifulSoup, PostgreSQL, Bootstrap, Pytest, flake8);
- Page Loader: CLI app for downloading html-pages and resources on it (argparse, BeautifulSoup, Pytest);

Non-Technical Professional Experience 2014 - 2022

I have worked in various roles, including Assistant Director at Pulse Mediagroup, Account Manager at YandexMarket, and Manager at both HomeCreditBank and Russian Post. My achievements in these positions include initiating changes to items in the internal Yandex Wikipedia, earning a first-month bonus for outstanding performance, creating a newsletter, and participating in Bitrix24 implementation on big company.

Summary

I've been learning Python and programming for over 1.5 years. I focus on Python backend development, with experience in DevOps and JavaScript frontend.

I've built an async CLI app with recursive file system traversal, a large app with classic games featuring an achievement system, my own website using Docker and Nginx, and various CRUD web apps that you can find on my GitHub page.

I truly love programming and plan to grow rapidly and deeply in this field.

If you're looking for a developer with high potential, ambition, and talent, I hope to hear positive feedback from you and show these qualities in my work :)
